

What's sweeter than hearing
your baby's voice for the first time?

Your baby hearing yours.

A guide to your baby's first hearing test

MONTANA ♥ ●●●●●●
Newborn Screening

Why should my baby's hearing be tested?

- ♥ Most babies can hear well at birth, but a few do not.
- ♥ We test all babies to find the ones who may not be able to hear.
- ♥ Testing is the only way to know if a baby has hearing loss.
- ♥ It is important to find hearing loss as soon as possible. Babies whose hearing loss is not found early will have a hard time learning.
- ♥ If we find hearing loss early, there are many ways we can help your baby.
- ♥ Make sure your baby's hearing is tested before you leave the hospital.

What should I know about the test?

- ♥ The test is safe and painless and can be done in less than 10 minutes.
- ♥ Most babies sleep through the test.
- ♥ You will get the test results before you leave the hospital.
- ♥ Be sure to tell the hospital the name of your baby's health professional or clinic so they can send them the results.

Why do some babies need another hearing test?

♥ Some babies need another test because:

- They have fluid in the ear
- Baby was moving a lot during the initial test
- There was excessive noise in the testing room
- The baby has hearing loss

♥ Most babies who need another test have normal hearing. Some will have hearing loss.

♥ If your baby does not pass the hearing test, make sure he or she is tested again as soon as possible, and by no later than one month of age.

Can a newborn baby pass the hearing test and still have hearing loss?

♥ Yes, some babies hear well enough to pass the first test, but lose their hearing later because of:

- Some illnesses
- Some injuries
- Certain medicines
- A family history of hearing loss

♥ Watch for signs of hearing loss as your baby grows.

♥ Use the list on the next page as a guide.

A baby with normal hearing should be able to:

♥ Birth to 3 Months of Age

- Blinks or jumps when there is a sudden loud sound
- Quiets or smiles when spoken to
- Makes sounds like “ohh”, “ahh”

♥ 3 to 6 Months of Age

- Looks for sounds with eyes
- Starts babbling (“baba”, “mama”, “gaga”)
- Uses many sounds, squeals and chuckles

♥ 6 to 9 Months of Age

- Turns head toward loud sounds
- Understands “no-no” or “bye-bye”
- Babbles, for example “baba”, “mama”, or “gaga”

♥ 9 to 12 Months of Age

- Repeats simple words and sounds you make
- Correctly uses “mama” or “dada”
- Responds to singing or music
- Points to favorite toys and objects when asked
