

# Top Identified Public Health Hazards

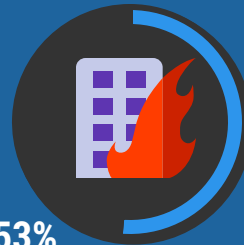

reported by Health Jurisdiction  
July 2015 - June 2016

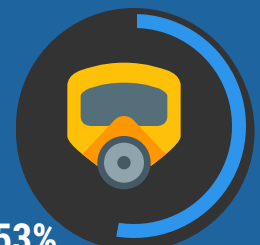

Severe Weather

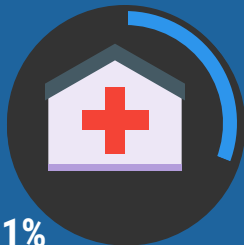

Flood

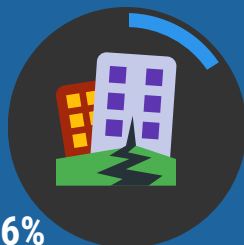

Wildfire

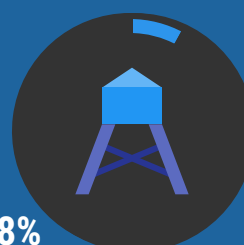

Hazardous Material Release

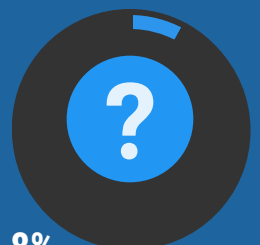

Communicable Disease

Other Natural Disaster

Contaminated Water

Other

51 local health jurisdictions worked with local emergency planners to identify their top three public health hazards. We compiled them above. Below, the top three by ranking overall.

Depicted are the most frequent responses by rank from 1st - 3rd.

Reviewing and ranking current threats with preparedness partners is important for planning and renewing public health's role in emergency management.
