

TAKE ON TB

Montana!

Montana is closer than it has ever been to eliminating Tuberculosis (TB). Let's END TB!

3

cases of TB were reported in Montana in 2017

9,272 cases of TB were reported in the U.S. in 2017.

The Montana TB case rate is:

0.3 per 100,000 people

The national average is **2.9** per 100,000 people.

TB IS PREVENTABLE & CURABLE.

TB is spread through the air from one person to another.

Symptoms of TB disease include:

- Cough lasting longer than 3 weeks
- Chest pain
- Night sweats
- Weight loss
- Weakness
- Chills
- Fever

A typical TB case requires:

PLUS

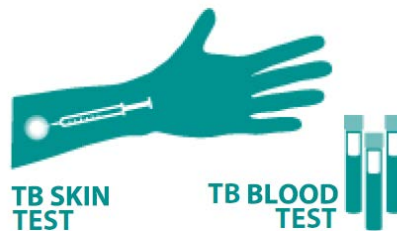

- X-rays
- Lab tests
- Follow-up & testing of contacts

TB CAN HAPPEN ANYWHERE & TO ANYONE.

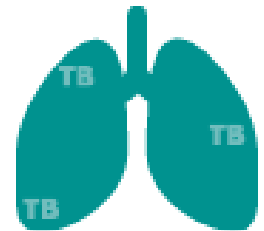

To eliminate TB, we must reach the **hardest hit populations:**

80% of new TB cases in 2017 were born outside of the United States

People at increased risk for TB infection should get tested.

Early detection & treatment of TB infection prevents active TB disease.

ELIMINATING TB REQUIRES A COMPREHENSIVE APPROACH.

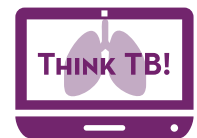

Testing & Treatment of High-Risk Populations

Strong TB programs to find & treat cases

Addressing the threat of drug-resistant TB

Education of Health Care Providers

Wanted:
Leaders for a TB-Free United States.

WORLD TB DAY
— MARCH 24 —

END TB
